**DETAILED ACTION**

***Response to Request for Reconsideration***

1. This action is in response to the request for reconsideration mailed April 19, 2004. Claims 1-7 are pending.

***Double Patenting***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-7 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 and 10 of copending Application No. 10/393671. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications include a light diffusing sheet comprising a transparent base sheet and a light diffusing layer provided on a front surface side of the base sheet, wherein the light diffusing layer

includes a light diffusing agent in a binder and where the fine inorganic filler having an average particle diameter of 5 nanometers to 50 nanometers.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Harada et al (U.S. 6,709,143) teaches a light diffusion sheet, where the binder of the light diffusion layer includes an inorganic filler comprising colloidal silica (column 7, lines 49 through column 8, line 15).

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

### ***Response to Arguments***

5. Rejection made under 35 U.S.C. 103(a) as being unpatentable over Uchiya et al (U.S. 6,579,606) in view of Nitta et al. (U.S. 5,800,909) is withdrawn due to the colloidal silica of Nitta being a part of the recording layer and not the light diffusing layer.

The obviousness-type double patenting rejection as being unpatentable over claims 1-3 and 10 of copending Application No. 10/393671 is maintained as Applicant fails to argue this rejection.
